Aquatronic™ ME-Series • UV Water Disinfection Systems

Aquatronic™ ME-Series
UVC Germicidal Water Treatment Systems provide safe, potable water for your home.

Flow control assures effective disinfection.

UVC monitor measures actual UV output with low output alarm and water shut-off option.

Aquatronic™ UV kills germs in your water without adding chemicals that can adversely affect taste, health and the environment.
Ultravation Aquatronic™ ME-Series UV Disinfection Systems use ultraviolet light to disinfect household water and are designed to provide consistent potable water for drinking, cooking and bathing. Aquatronic™ systems are particularly useful for treating well and spring-fed water systems where bio-contamination is always a potential problem. We recommend water testing be performed and analyzed by a water quality professional.

Real-time UV output level monitor
The ME-Series features a UV-C monitor that displays the actual UV intensity level inside the disinfection chamber, indicating the exact UV-C status at a glance. It sounds an alarm if the UV output is too low. It also reminds when the lamp needs to be changed and the quartz sleeve cleaned. It also features connections for an optional solenoid valve that will stop water flow when the UV lamp is not operating or output is too low.

16,000 microwatt(µw) UV dose
ME systems produce 16,000µw/cm² of UV energy. Ultravation UltraMAX™ UV lamps are encased in precision cut, fire polished quartz sleeves that maximize microbe exposure to the germicidal wavelengths of UVC light.

Electropolished stainless steel construction
Ultravation water disinfection chambers are fabricated to industrial standards from 304 stainless steel utilizing plasma arc fusion welding for uncontaminated welds and are electropolished and passivated for unsurpassed strength and food grade quality.

Electronic ballast
The electronic ballast assures UV output performance for stability over a wide range of voltage fluctuations. Designed to optimize reliability and maximize UV output over the life of the lamp.

Installation
ME models install vertically or horizontally, after the pressure tank and any other treatment devices (such as softeners or filters), and before the point of first potable water use. The UV lamp and quartz sleeve remove from the top of the unit for easy maintenance.

Additional features:
- Adds no chemicals or other substances to the water
- 10 gpm (ME-10) or 20 gpm (ME-20) capacities
- 9000 hour (approx one year) UV lamp life
- UV viewport compression nut
- Mounting brackets included
- Installs using standard household fittings
- Low power consumption
